

Enhanced CBD

Premium Full Spectrum Phytocannabinoid-Rich (PCR) Hemp Oil Extract Products

- **THC Free Cannabidiol**
- **Made in USA**
- **Derived from Organically Grown Colorado Industrial Hemp**

● What is CBD?

Cannabidiol, or CBD, is just one of over 85 cannabinoids discovered to date in the cannabis plant. CBD, when not combined with the THC molecule, is a legal botanical extract molecule. Because it is non-psychoactive, CBD is widely regarded as the cannabinoid with the most medical potential by researchers. CBD interacts with the body's natural endocannabinoid system to **promote homeostasis for overall health and wellness.***

CBD has been seen in ECN patients to exhibit many beneficial effects, including providing symptom relief. The conditions supported by CBD fall into two broad categories – neurological and physiological.

● The Enhanced Difference

Our products truly are superior to other CBD products currently on the market. **Enhanced CBD** offers a full spectrum of cannabinoids, terpenes and beneficial fatty acids extracted from industrial hemp, with no detectable levels of the psychoactive compound THC. Our products are derived from sustainable hemp that is non-GMO and cultivated without pesticides, herbicides or chemical fertilizers. Our full spectrum PCR hemp oil is extracted from the plant without harming the precious molecules, ensuring each tincture contains premium product. Our products are formulated with active ingredients that are accurately reflected on the label, without fillers. **Enhanced CBD contains all 1000 mg of cannabidiol to give you maximum benefit.**

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, prevent or cure any disease. CBD drug interaction and side effect documentation is limited. Check with your healthcare practitioner for additional guidance. We highly recommend always checking with your physician before starting a new botanical extract, medicinal herb, or dietary supplement program.

Why Choose Enhanced CBD?

Phytocannabinoid-Rich (PCR) Hemp Oil Extract

Many CBD oil products are simply cannabidiol isolate suspended in hemp oil or other carriers.

Enhanced CBD is unique in that it offers cannabidiol in addition to a full range of cannabis molecules that work synergistically with CBD to offer the **full spectrum of benefits with no psychoactive THC**. Derived from a fully and vertically integrated production model, our products are controlled from cultivation and processing to distribution. This guarantees our customers a consistent, pure and superior premium product.

The Body's Natural Endocannabinoid System

The body has two neural receptors, CB1 and CB2, that bind with cannabinoids such as CBD and affect physiological function. These cannabinoid receptors are found throughout the body and impact pain sensation and memory, among other functions. CB1 and CB2 receptors control where cannabinoids are activated throughout the body, which aids with maintaining homeostasis and balances overall wellbeing.

According to a study published in the National Institutes of Health database[†], 92% of medical cannabis patients agree that cannabinoid treatment works for them. Researchers agree that this is due to the effects of cannabinoids on the brain and the body's neural networks.

The Complete Plant Profile

Our proprietary extraction technology allows for high levels of phytocannabinoids while eliminating unwanted amounts of THC and chlorophyll. We utilize a chromatography technique which allows for the identification and removal of the naturally occurring trace amounts of THC from the oil, while leaving intact the full spectrum profile of non-psychoactive phytocannabinoids and synergistic compounds such as cannabigerol (CBG), cannabinol (CBN), cannabichromene (CBC), and over 40 naturally preserved terpenes. Our rigorous testing system ensures accurate levels of phytocannabinoids and confirms the absence of THC. The end result is the highest quality full spectrum hemp-derived phytocannabinoid rich oil that contains no solvents, no heavy metals and no pesticides. **Our final product is free of THC and rich in CBD.**

Useful Terms

Cannabichromene (CBC) CBC phytocannabinoids contribute to the analgesic, anti-inflammatory, and anti-fungal effects of medical cannabis.*	Cannabinol (CBN) A non-psychoactive cannabinoid with analgesic properties that reportedly aids in sleep and appetite regulation.*
Cannabidiol (CBD) A major phytocannabinoid, accounting for as much as 80% of the plant's extract.	Terpenes Non-psychoactive molecules that enhance norepinephrine activity and increase dopamine activity.*
Cannabigerol (CBG) The non-acidic form of cannabigerolic acid, the parent molecule from which many other cannabinoids are made.	Tetrahydrocannabinol (THC) A psychoactive phytocannabinoid that typically causes a neurological effect of euphoria.
